Architex®

DRx Disposable
Privacy Curtains

Protect patients. Reduce costs. Save time.

Architex DRx privacy curtains are created in recyclable and disposable polypropylene bringing beautiful design and enhancing the way healthcare facilities manage their cleaning procedures and appearances.

DRx patterns are designed to keep changeover times to an all-time low while remaining durable enough to hang as long as traditional curtains.

FEATURES	DESCRIPTION
Specifications	+ 100% Recyclable Polypropylene + 100 GSM fabric thickness + NFPA 701 + Self-Auditing label + Finished Size is 100" V (includes 20" white mesh) x 100" H + Finished side seams and tie backs + Lightweight and easy to deploy + Individually packaged; Sold in boxes of 30 + Quick Ship
Time Efficiency	+ Increases Productivity and Efficacy + Up to 75% Reduced curtain replacement time + Standardized size eliminates the need for sorting and matching for rooms + Reduced Delays in Admission
Reduced Costs	+ Reduced costs including capital, repair, labor, laundry and damage and loss expenses + No laundering necessary
Hygenic	+ Individually encased in plastic seal to ensure cleanliness + Antimicrobial and Fungal Resistant technology helps prevent the transmission of disease
Environmental	+ Recyclable and Disposable + Antimicrobial is EPA registered, non-depleting, non-leaching, no heavy metals
Application	+ Entire Facility + ER, ICU and Critical Care Rooms + Endoscopy and Burn Units + Unit Wide Infections and Pandemics + Spare Curtains for Temporary Use

Best of Both | Coordinating DRx and Rx Privacy Curtains

Enhance infection prevention protocols with our hybrid reusable privacy curtain and disposable privacy curtain program. Coordinating disposable and reusable fabrics elevates your safety while improving the look of your facility.

Architex brings you function and aesthetics by allowing you to choose any fabric and be able to have reusable privacy curtains throughout your facility, and disposable privacy curtains where ever you need them. Now you don't have to choose between Reusable or Disposable Curtains. You can have both!

Provides privacy for
patients + staff.

Maintain a consistent,
uniform look.

Optimize labor +
processing costs.

Recycling + Incinerating
DRx Privacy Curtains FAQ

Are Architex DRx Privacy Curtains recyclable?

Yes. They are made from chemical-free 100% non-woven polypropylene. Polypropylene is a widely recycled plastic, internationally classified as type 5. It may be combined with other post-consumer polypropylene waste. Such material, unless biologically soiled, can be captured and classified as non-clinical waste and can be recycled on-site or off-site.

Can I recycle biohazardous Architex DRx Privacy Curtains with non-biohazardous curtains?

No. Although the disposable curtains are recyclable, there are different measures to take if a curtain is considered to be biohazardous. Biohazardous curtains should follow the facility's biohazard disposing and packing procedures.

Do you have a certification showing your curtains are recyclable?

Polypropylene is part of the international coding system of plastics—classification type 5—thus no certification is required.

Is recycling polypropylene safe for landfills?

Landfill research has determined that polypropylene is the safer of plastics. In specific, there is no hard evidence or research indicating that this type of plastic is dangerous.

Can I incinerate Architex DRx Privacy Curtains?

Yes.

What are the harmful causes of incinerating Architex DRx Privacy Curtains?

Each facility has different medical waste incinerators burning at very high temperatures. In a typical setting, all the medical waste would be incinerated together, including disposable curtains. Hospitals are obligated to use medical waste incinerators that reduce emissions into the environment. Thus, the waste would be comingled, and multi-contaminant waste would be burnt. It is very difficult to specifically capture evidence on the burning effect of only the disposable curtains. The curtains would have to be burned separately from other medical waste, and the toxicity would be based on the volume. The more volume, the more toxic. This would be standard across all incineration practices, for polypropylene plastic or any other plastic.
